

Developing Resilience

Know Your Risks

Assess what your risks are (ransomware attack, data breach, power outage, etc.).

Prepare For Your Risks

- Determine your response plans for your risks.
- Check that backups are being stored for your important data.
- Check for working backup systems.
- Ensure knowledge of these plans and systems is transferred to other team members.

Practice, Practice, Practice

- Run through your developed response plans.
- Conduct simulations of breaches.
