Penetration Testing

Valencia believes in an empowered and safe digital world for everyone. This goal is the guiding principle of what we do.

We simulate real-world attacks against your applications, infrastructure, people, and AI tools to find exploitable weaknesses before attackers do. Our testing follows NIST, OWASP, and SANS standards, and every finding comes with a rating and a recommended safeguard.

OUR TESTING SERVICES

WAYS TO ENGAGE

One-Time Testing	A scoped test with rated findings, a recommended fix for each, and immediate notice of critical issues.
Pen Testing as a Service	Ongoing testing that keeps pace as your systems change.

SIMULATE

Red Team / Blue Team	Threat-actor simulations that test your defences across people, processes, and technology.
Breach Simulations	Tabletop exercises that test how your leaders decide, communicate, and escalate during a breach.

TEST

External Network Testing	Open-source reconnaissance, scanning, and manual testing of your internet-facing services.
Internal Network Testing	Mapping and testing the hosts and services inside your network, with privilege escalation where agreed.
Vulnerability Assessment	Weaknesses found and prioritized across networks, systems, cloud, and applications.
Web Application Testing	Coding and business-logic flaws tested against OWASP requirements, plus the controls that protect the application.
AI Security Testing	Your AI tools, agents, and integrations tested for prompt injection, data leakage, and over-privileged access.
Phishing Simulations	Controlled phishing campaigns that measure how susceptible your users are.

Our team of experts can help you determine your needs. We support you with a **clear, evidence-based path forward. Reach out today.**
