ValencAI

Using AI internally as a security-led business

ValencAI is how Valencia runs on AI. One assistant gives our people a single place to ask, report and act, reaching the systems we already use through controlled connectors and governed by written rules on what it may see and do. We use it every day for bids, proposals, document review and practice operations, and we bring that experience to clients who want AI to do useful work under control.

The ValencAI target architecture, simplified. AI reaches business systems only through controlled connectors, and only within the constitution.

BUILT ON RESEARCH AND ADVISORY EXPERIENCE

Our research into AI-supported security assessment and secure deployment design has received support from the National Research Council of Canada Industrial Research Assistance Program (NRC IRAP). It shapes our day-to-day work as a security and privacy advisor.

HOW WE CAN HELP YOUR AI INITIATIVE

Choose the right first use

AI readiness and strategy: find a process worth improving, scope it and agree how to measure success.

Architect and Connect

Connect approved information and systems through reusable skills, secure connectors and bounded workflows.

Secure and Govern

Policies, a constitution, permissions, approval points, audit records and testing before autonomy grows.

Get in touch to see how we can support your AI initiative.
